-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 4/15/03.
- 2a) ☒ This action is **FINAL**.                      2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1,3-7,9-12, 14-22 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1, 3-7,9-12, 14-22 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on \_\_\_\_\_ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

**Priority under 35 U.S.C. §§ 119 and 120**

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

**Attachment(s)**

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413) Paper No(s). \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other:

### DETAILED ACTION

In response to Amendment filed 4/15/03, claims 1, 3-7,9-12, 14-22 are pending in this Application. Claims 2, 8, and 13 have been canceled.

#### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

3. **Claims 1, 3-7,9-12, 14-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lippert et al. (U.S. Patent Application Publication 2002/0024495 A1; hereinafter Lippert) in view of Task et al. (US Statutory Invention Registration H1599; hereinafter Task).**

Regarding claims 1, 7,12, and 15, Lippert discloses a training system for teaching the use of night vision goggles comprising: a pair of simulated night vision goggles 72; a system 78 generating high fidelity, infrared, terrain simulation images; and optically combining the output

of three video signals (§ 65) and providing irradiance to an image intensifier tube 96 to simulate viewing of bright lights (§ 14).

Lippert does not explicitly disclose that the three video signals are *12-bit* and does not specifically disclose *weighted neutral density filters* (as per claims 1, 7, 12, and 15). However, it is the examiner's position that increasing the bit length of a video signal, and specifically providing a *12-bit* video signal is old and well known in the art for providing an enhanced, natural image; and furthermore, providing weighted neutral density filters is notoriously old and well known in the art for increasing the dynamic range of R-G-B signals of night vision goggles to produce relatively bright to dark images. Therefore, at the time of the invention, it would have been obvious to a person of ordinary skill in the art to modify the video signals described in Lippert, by utilizing 12-bit video signals to provide an enhanced, natural image; and to further modify the night vision goggles, by providing a neutral density filter for increasing the dynamic range of R-G-B signals to produce relatively bright to dark images.

Lippert further discloses scan conversion means 84, yet does not explicitly disclose a scan conversion means *at the output of an image intensifier tube including a video camera* (as per claims 1, 7, 12, and 15). However, Task discloses a night vision surveillance system comprising video cameras 105 and 124 optically coupled to the output of image intensifier tubes 103 and 120 (See Fig. 1). Hence, at the time of the invention, it would have been obvious to a person of ordinary skill in the art to modify the night vision goggles described in Lippert, by scan converting the output of an image intensifier tube by optically coupling a video camera, in light of the teachings of Task, in order to provide color encoding for increasing the speed and accuracy of object detection and recognition, and furthermore to provide a recording of the

images, viewed through the night vision goggles, for evaluation purposes (Col.5, line 54- Col. 6, line 24; Col. 8, lines 5-14).

Regarding claims 3, 9, 12, and 14, Lippert discloses a training system including a system wherein a resultant image is projected onto a display screen 1156 (See Fig. 12).

Regarding claims 4,10, 12, and 16, Lippert discloses a system wherein the communication system includes a system for allocating three video signals at different intensities (P. 6, Paragraph 0071). Lippert does not explicitly describe the intensities as *low, medium, and high*. However, it is the examiner's position that it is notoriously old and well known for night vision devices to include a system for allocating three video signals representing scene elements of low, medium, and high light intensity. At the time of the invention, it would have been obvious to a person of ordinary skill in the art to modify the video signals described in Lippert, by allocating the signals to represent elements of low, medium, and high light intensity in order to provide a large dynamic range of bright to dark images to provide an accurate simulation of the night vision goggles.

Regarding claims 5, 11, 12, 17, and 20, Lippert discloses a training system and method including a system for providing a stable image regardless of the simulated night vision goggle line of sight (P. 4, Paragraphs 0051, 0052).

Regarding claims 6, 12, 18-19, and 21-22, Lippert discloses a training system wherein signal generation and communication systems are provided in a light tight package to maintain contrast (P. 1, Paragraph 0014).

***Response to Arguments***

4. Applicant's arguments with respect to claims 1, 3-7,9-12, 14-22 have been considered but are moot in view of the new ground(s) of rejection.

***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

- Takagi (US Patent Application Publication 2002/0012008 A1) – discloses the need to utilize 12-bit video signals to provide an enhanced, natural image.

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Art Unit: 3713

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cameron Saadat whose telephone number is 703-305-5490. The examiner can normally be reached on M-F 8:00 - 4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Valencia Martin Wallace can be reached on 703-308-4119. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9302 for regular communications and 703-872-9303 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-1148.
